

Tournament Mode

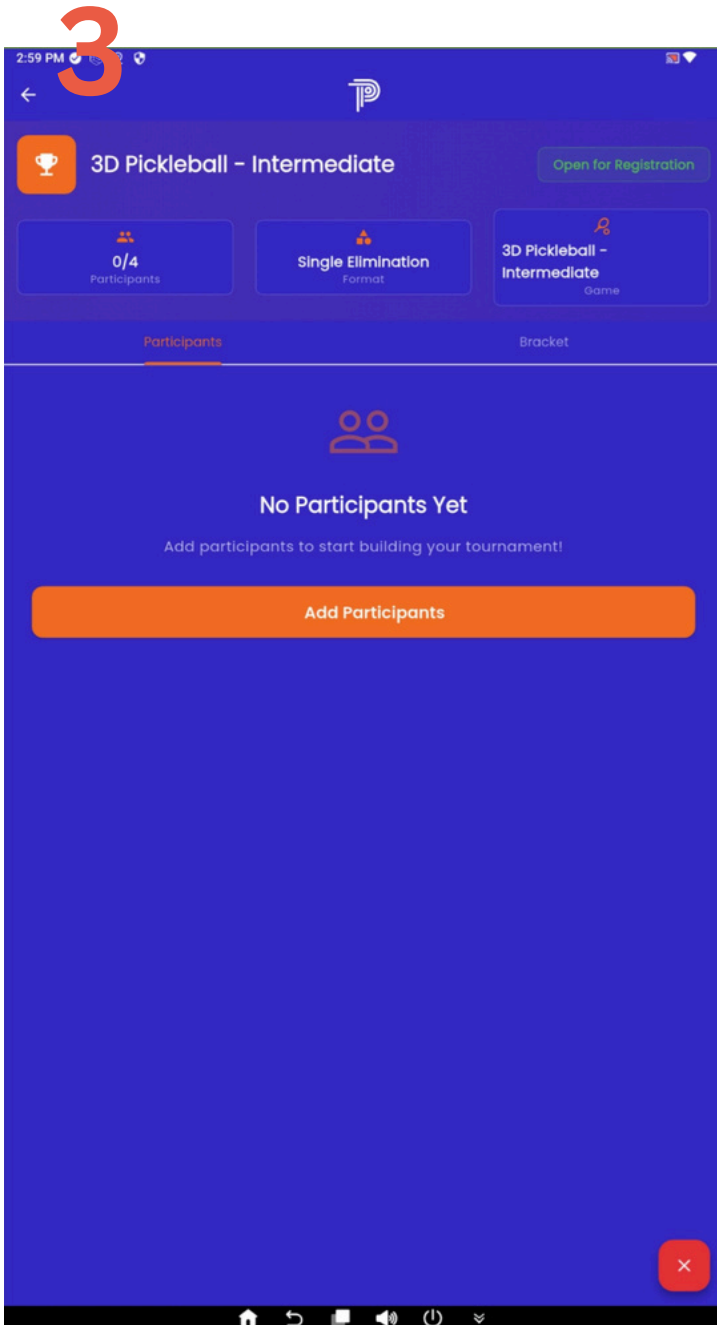

Here on the main page of the customer-facing app on the facility's kiosk or tablet, players select *Tournament* to get started.

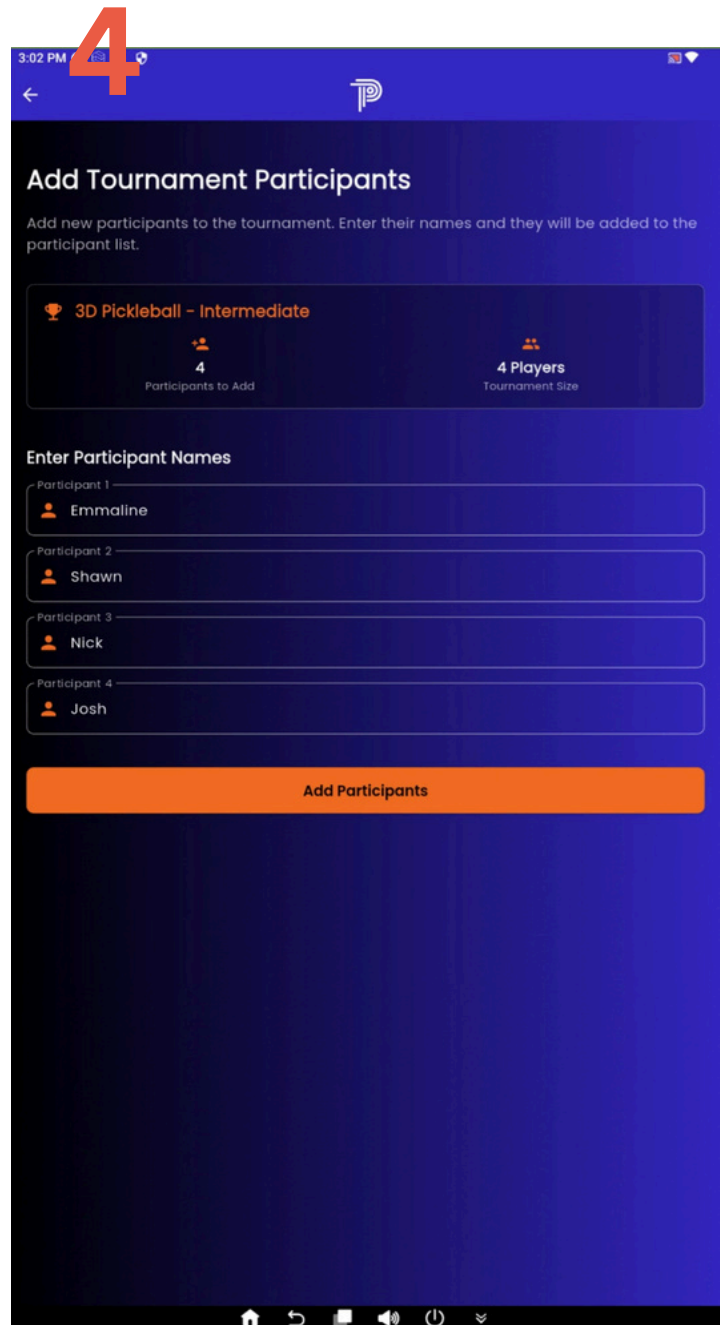

This guides players to the tournament setup page where they select the game they will play, tournament type (single/double elimination/swiss), and # of players.

Tournament Mode

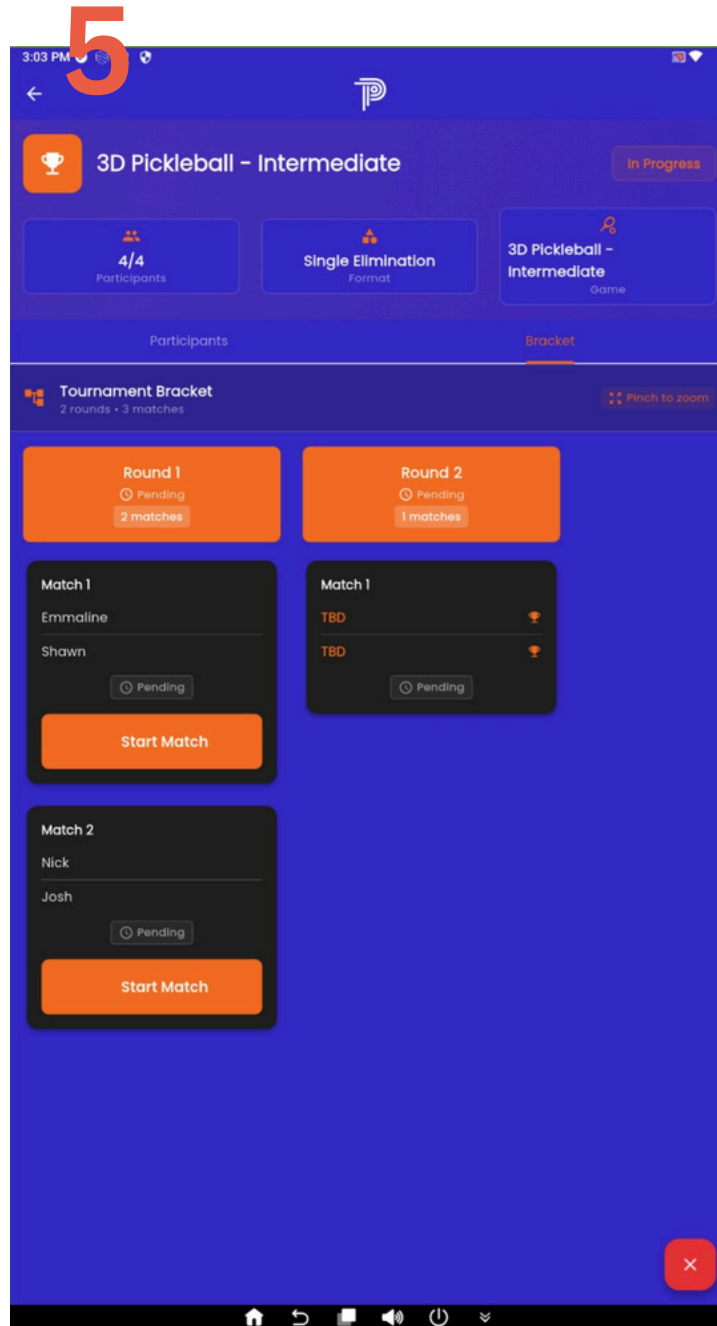

After the tournament settings are selected, players enter their names as tournament participants.

Once all names are entered for the selected tournament size, the participants can be added to begin the tournament.

Tournament Mode

Players are then taken to the bracket screen to see the matchups and begin playing. In this single elimination example, the winning player moves on to the next round and the loser is out. Upon the final match results, the winner is congratulated on a pop-up message.

Larger tournaments can be set up by the facility staff in the client portal or can be setup by the Playkout team. Those versions go up to 128 players and allow for tournament naming.
